

Driving sustainable journeys on the road to Net Zero

As the leading hygiene service provider in the UK, Spain, and Ireland, **pHS** Group are committed to leading the way in environmental responsibility and sustainability. Our innovative **pHS** LifeCycle Strategy process is a cornerstone of our mission, diverting over **55,000 tons** of offensive waste away from landfills each year and transforming it into valuable energy. This initiative not only contributes to a low carbon economy but also aligns with our dedication to supporting communities and people.

Our commitment to sustainability

Our **pHS** LifeCycle Strategy process is designed to ensure that hygiene waste collected from our customers does not end up in landfills. Instead, it is directed to energy-from-waste sites across the country and is converted into energy, powering homes, industries, and schools. With an aim of reaching up to **95% landfill diversion**, we are well underway to achieving our goal with **92% diversion** rate in 2023, with areas such as London and the Midlands being **zero to landfill** for over 3 years.

From sanitary and male incontinence waste to other hygiene waste, it all undergoes responsible disposal methods, aligning with our own and our customers' environmental objectives. This not only reduces the environmental impact of waste but also contributes to the development of a more sustainable and circular economy.

1

WE'RE ALL HUMAN and we all produce waste

2

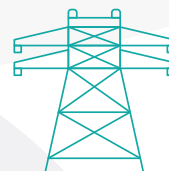

LANDFILL DIVERSION, taking waste to energy recovery sites

3

CONVERSION INTO POWER, generating electricity

4

POWER TO THE PEOPLE, supplying energy to homes, schools, and industries

5

WE DON'T STOP THERE as the bottom ash from the process is recycled into the construction industry

Supporting people and the communities we serve

Beyond our environmental efforts, **phs** is actively engaged in supporting communities by putting people in the heart of our products and services. Our partnership with Prostate Cancer UK is a testament to our commitment to social responsibility. The ***Dispose with Dignity*** campaign, in collaboration with Prostate Cancer UK, focuses on providing men with disposal bins for their waste in male washrooms. This initiative not only addresses a practical need but also contributes to promoting men's health and well-being.

By choosing to facilitate these bins, you are aligning yourself with our commitment to diverting hygiene waste away from landfills, promoting social value, supporting men who need your help and saving you money from potential maintenance and unblocking of toilets.

Contributing to a low carbon economy

By diverting waste from landfills, investing in energy-from-waste solutions, and supporting social initiatives, **phs** is actively contributing to the transition towards a low carbon economy. Our holistic approach integrates environmental, social, and economic considerations, demonstrating our dedication to sustainable practices.

phs is more than a hygiene services provider; we are a partner in sustainability and a driver of positive change. Through our **phs** LifeCycle Strategy process, waste diversion initiatives, and social value initiatives, we are actively shaping a future that is not only environmentally responsible but also socially and economically sustainable.

Join us on our journey towards a greener and more sustainable world.
